

Total Emission Solutions for EMD Engines

Electro-Motive Diesel has provided emission solutions for its engines for over 25 years and continues to lead the industry in emission compliance solutions for new and existing locomotives.

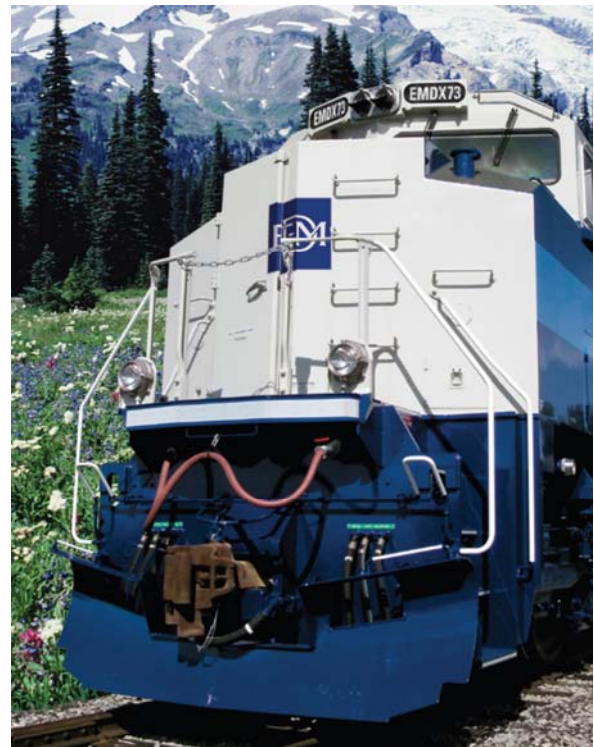

One of the EPA's guiding principles for the remanufacturing provision of the new 40 CFR part 1033 emission rule was to achieve sizeable reductions in NOx and PM emissions as early as possible. EMD is prepared to meet this challenge. Its advanced emission research team has used extensive iterative testing to develop the most advanced emission solutions for all EMD locomotive models.

System Integration

EMD's full system knowledge allows for the most reliable and fuel efficient emission kits for EMD locomotives. Meeting emissions is not a piece part activity but a finely-tuned balance between emissions compliance and fuel efficiency. Reverse engineered parts lack the proven reliability, systems integration, and support that only the OEM can provide.

Customized Solutions

EMD can provide custom emission solutions to meet various local and state emission rules that go beyond EPA requirements including NOx and PM reduction kits.

Benefits of OEM Emission Solutions

- ✓ OEM system knowledge and integration for maximum performance
- ✓ 25-45% NOx reduction
- ✓ 40-60% PM reduction
- ✓ Best-in-class fuel efficiency
- ✓ Proven OEM reliability and performance
- ✓ Customized emissions kit applications for fleet averaging needs
- ✓ OEM support and service

Insist on genuine EMD parts!
