

Total Emission Solutions for EMD Engines

As the OEM, Electro-Motive Diesel has provided high performance emission reduction solutions for its engines for over 25 years. And EMD continues to lead the industry in emission compliance solutions for new and existing locomotives.

A guiding principle for EPA in developing its next generation standards is to achieve sizeable reductions in locomotive NOx and PM emissions, as early as possible. EMD is prepared to meet this challenge by developing the most environmentally friendly emission kits, which will meet or exceed mandated performance levels as required by EPA regulations.

System Integration

EMD's full system knowledge allows for the most reliable and fuel efficient emission kits for EMD locomotives. Meeting emissions is not a piece part activity but a finely-tuned balance between emissions compliance and fuel efficiency. Reverse-engineered parts lack the proven reliability, system integration, and support that only the OEM can provide.

Customized Solutions

EMD can provide custom emission solutions to meet various local and state rules that go beyond EPA requirements, including NOx and PM reduction kits achieving Tier 2 performance levels.

Benefits of OEM Emission Solutions

- ✓ OEM system knowledge and integration for maximum performance
- ✓ 25-45% NOx reduction
- ✓ 40-60% PM reduction
- ✓ Best-in-class fuel efficiency
- ✓ Proven OEM reliability and performance
- ✓ Customized emissions kit applications for fleet averaging needs
- ✓ OEM support and service

Insist on genuine EMD parts!
